

The Ecological Value of Coastal Fog—

Cooling relief and nebulous forecasts for northern California

By Alicia Torregrosa, USGS Physical Scientist

Did you know:

- The Moss Beach/Montara area north of Half Moon Bay is the foggiest place in the San Francisco Bay Area?
- Summertime fog in northern California depends on ocean conditions from Tahiti to Alaska?
- The presence of coastal fog is critical to maintain biodiversity?
- Fog water can be harvested by meshes that mimic desert dune grasses?
- New satellite sensors are among many new tools for ecologists and resource managers to understand fog dynamics?

Free Public Lecture • July 31, 2014, 7PM

U.S. Geological Survey, Bldg. 3, Auditorium • 345 Middlefield Road, Menlo Park, California
